

GetUserDetails Class

Apex Code

```
public with sharing class GetUserDetails {
    public class Input {
        @InvocableVariable(required=true description='Name to search for')
        public String name;
    }

    public class Output {
        @InvocableVariable(description='Result message')
        public String message;
        @InvocableVariable(description='Result object as JSON string')
        public String resultObject;
        @InvocableVariable(description='List of User sObjects')
        public List<User> userList;

        public Output(String message, Object resultObject, List<User> userList) {
            this.message = message;
            this.resultObject = resultObject != null ? JSON.serialize(resultObject) :
null;
            this.userList = userList;
        }
    }

    @InvocableMethod(label='Get User Details' description='Query user details by
name')
    public static List<Output> getUserDetails(List<Input> inputList) {
        List<Output> results = new List<Output>();
        if (inputList == null || inputList.isEmpty()) {
            results.add(new Output('No input provided', null, null));
            return results;
        }

        Input input = inputList[0];
        List<User> users = UserHelper.queryUsersByName(input.name);

        if (users.isEmpty()) {
            results.add(new Output('No users found', null, null));
        } else {
            results.add(new Output('Users found', null, users));
        }

        return results;
    }
}
```

Methods

getUserDetails(inputList)

INVOCABLEMETHOD

Signature

```
public static List<Output> getUserDetails(List<Input> inputList)
```

Parameters

Name	Type	Description
inputList	List<Input>	

Return Type

List<Output>
