

TaskHelper Class

Apex Code

```
public with sharing class TaskHelper {
    public static List<Task> queryTasks(
        String subject,
        String owner,
        String status,
        String priority,
        Date dueDate,
        Date dueDateStart,
        Date dueDateEnd,
        String whatId,
        String whoId,
        String taskSubtype
    ) {
        String query = 'SELECT Id, Subject, OwnerId, Owner.Name, Status, Priority,
ActivityDate, Description, WhatId, WhoId FROM Task';
        List<String> conditions = new List<String>();

        // Build query conditions based on input
        if (subject != null) {
            String likeSubject = '%' + subject + '%';
            conditions.add('Subject LIKE :likeSubject');
        }
        if (owner != null) {
            String likeOwner = '%' + owner + '%';
            conditions.add('Owner.Name LIKE :likeOwner');
        }
        if (status != null) {
            conditions.add('Status = :status');
        }
        if (priority != null) {
            conditions.add('Priority = :priority');
        }
        if (dueDate != null) {
            conditions.add('ActivityDate = :dueDate');
        } else {
            if (dueDateStart != null && dueDateEnd != null) {
                conditions.add('ActivityDate >= :dueDateStart AND ActivityDate <=
:dueDateEnd');
            }
        }
        if (whatId != null) {
            conditions.add('WhatId = :whatId');
        }
        if (whoId != null) {
            conditions.add('WhoId = :whoId');
        }
    }
}
```

```

        if (taskSubtype != null) {
            conditions.add('TaskSubtype = :taskSubtype');
        }

        // Add conditions to query if any exist
        if (!conditions.isEmpty()) {
            query += ' WHERE ' + String.join(conditions, ' AND ');
        }

        // Execute query and return results
        return Database.query(query);
    }
}

```

Methods

queryTasks(subject, owner, status, priority, dueDate, dueDateStart, dueDateEnd, whatId, whoId, taskSubtype)

Signature

```

public static List<Task> queryTasks(String subject, String owner, String status,
String priority, Date dueDate, Date dueDateStart, Date dueDateEnd, String whatId,
String whoId, String taskSubtype)

```

Parameters

Name	Type	Description
subject	String	
owner	String	
status	String	
priority	String	
dueDate	Date	
dueDateStart	Date	
dueDateEnd	Date	
whatId	String	
whold	String	
taskSubtype	String	

Return Type

List<Task>
